

SERVICE PROVIDER INTEGRATIONS

ARE YOU ON THE RIGHT ROUTE?[®]

RouteOne has developed a true dealer choice model, providing open access to multiple Dealership Service Providers (DSP), allowing dealers the option to select which service providers best meet the needs of their business. It is the most comprehensive in the industry. Our solution provides dealers the benefit of spending more time selling and less time on administrative tasks. RouteOne will continue to seek partners offering advanced technologies that can be leveraged for the benefit our dealers. With RouteOne's open integration solution, you can:

- Eliminate duplicate entry into multiple systems
- Exchange credit application and decision information between your Dealership Management System (DMS) and finance sources in near-real time, simplifying and improving the credit application process
- Send the application from your DMS to RouteOne for finance source submission, and return the credit decision received from the finance source from RouteOne to your DMS; or, originate an application in RouteOne, send it to the DMS to populate customer screens, and work the deal further
- Get a concise yet comprehensive view of your dealership's finance department and lender performance to pinpoint new opportunities for growth and profit
